CUSTOMER SUCCESS OS

The AI Toolkit for CSMs

5 copy-paste prompts that turn your most dreaded weekly tasks into 90-second drafts.

1. Meeting Prep Brief
2. QBR Narrative Builder
3. Escalation Brief Generator
4. Client Email Polisher
5. Weekly Priorities Organizer

Advise more. Chase less.

BY GREG HUMLICEK · CUSTOMERSUCCESSOS.COM

How to use this toolkit.

Four ground rules that separate getting useful AI output from getting AI-shaped slop.

1. **Paste real context. Always.**

   Vague prompts get vague output. The single biggest jump in quality comes from giving the AI actual notes, real names, and specific numbers. If you're tempted to type "[describe situation here]" — stop and paste the meeting notes instead.

2. **PHI, PII, and privileged data stay out.**

   If your company has an enterprise AI license with a signed BAA or DPA, follow your IT and compliance rules. If you're using a personal account, assume anything you paste may be used to train future models. Strip names, member IDs, and anything regulated before pasting.

3. **Treat every output as a draft, not a deliverable.**

   The prompts in this toolkit produce strong first drafts. They do not produce finished work. Always read, edit, and apply your judgment before sending anything to a client or executive. The point of AI is to give you a faster start, not to remove you from the loop.

4. **These work in any AI tool.**

   Claude, ChatGPT, Gemini, Copilot — all of them. The prompts are written to be tool-agnostic. If you have access to an enterprise license at work, use that. Free tools work too, with the privacy caveat from rule 2.

PROMPT 01 · MEETING PREP BRIEF

Walk into every meeting prepared.

Paste your raw notes on an upcoming client meeting and get a one-page brief with talking points, risks, and questions to ask. The kind of prep that used to take an hour, in 90 seconds.

★ WHEN TO USE · BEFORE EVERY CLIENT MEETING

THE PROMPT

```
You are my pre-meeting briefing assistant. I have a client meeting coming up and I need a one-page brief I can read in
60 seconds.

Client: [CLIENT NAME], a [INDUSTRY] company
Meeting type: [DISCOVERY / CHECK-IN / QBR / ESCALATION / RENEWAL]
My notes, prior meeting recaps, recent emails, and account context: [PASTE EVERYTHING]

Produce a brief with four sections:
(1) Three talking points I should lead with, ordered by client priority — not mine.
(2) Two risks or sensitive topics to handle carefully, with a one-line approach for each.
(3) Three open questions I should ask the client to learn something I do not already know.
(4) One decision the client needs to make in this meeting, framed as a clear ask.

Tone: direct and confident. No fluff, no preamble.
```

SAMPLE OUTPUT

INDUSTRY: HEALTHCARE SAAS · CLIENT: REGIONAL MEDICAID PAYER

Talking Points. (1) Q3 utilization milestones — they are tracking against the case-load target ahead of schedule. (2) The new clinical content module went live last week; ask how the pilot team is finding it. (3) Their HEDIS measures conversation from last QBR — proactively share the measurement gap analysis you ran.

Risks. Their CMO leaves in October; do not anchor any roadmap commitments to him. The integration ticket from August is still open — acknowledge it before they raise it.

WHY THIS WORKS

The structure forces the AI to separate what *you* want to talk about from what the *client* cares about. Most CSM prep flips that order. This prompt also forces you to enter the meeting with one specific ask — which is the difference between a check-in and a productive conversation.

★ **Pro tip.** *Paste the last meeting's recap notes too. The AI will reference open commitments and signal continuity, which is the fastest way to build executive trust.*

PROMPT 02 · QBR NARRATIVE BUILDER

Turn raw account data into an executive story.

Most QBR decks read like a status report. The best ones tell a story the executive in the room actually remembers. This prompt turns your raw notes, tickets, and metrics into that story in minutes.

★ WHEN TO USE · 2 WEEKS BEFORE EVERY QBR

THE PROMPT

```
You are my QBR narrative writer. I'm preparing a Quarterly Business Review for [CLIENT NAME], a [INDUSTRY] company.

Below are my raw notes, metrics, and recent account activity: [PASTE NOTES]

Transform this into an executive-ready narrative with:
(1) A 3-sentence partnership summary that frames the quarter.
(2) Top 3 wins this quarter with specific metrics — not adjectives.
(3) 2-3 areas for improvement framed as opportunities, not problems.
(4) Three forward-looking commitments for next quarter the client will recognize as concrete.

Tone: confident, collaborative, never defensive. Write for a VP who will skim in 90 seconds.
```

SAMPLE OUTPUT

INDUSTRY: FINTECH SAAS · CLIENT: REGIONAL BANK, 2,400 SEATS

Partnership Summary. Q2 marked the shift from deployment to adoption. Across three lines of business, daily active usage climbed from 41% to 68%, and the mortgage team moved their servicing workflow fully onto the platform. The partnership is healthy and expanding.

Top 3 Wins. (1) Adoption lift of 27 points in 12 weeks. (2) First-call-resolution improved from 61% to 74%. (3) Onboarding time for new LOs cut from 6 weeks to 11 days.

WHY THIS WORKS

The prompt forces structure before creativity. By demanding a 3-sentence summary, three specific wins, and forward commitments, it produces a narrative that lands the same way every time — which is exactly what executives want.

★ **Pro tip.** *Paste the last QBR's commitments too. The AI will reference them and signal continuity — which is the single biggest QBR credibility lever.*

PROMPT 03 · ESCALATION BRIEF GENERATOR

Write the escalation brief while the clock is ticking.

When something breaks and an executive is asking for a summary, you have minutes to write something that informs without inflaming. This prompt produces that summary in one pass.

★ WHEN TO USE · WITHIN 2 HOURS OF EVERY SEV 1 OR SEV 2

THE PROMPT

```
You are my escalation brief writer. I need a crisp internal summary I can send to my leadership in the next 30 minutes.

Client: [CLIENT NAME]
Severity: [P1 / P2]
What happened (raw timeline, ticket numbers, what was said by whom): [PASTE]

Produce an escalation brief with:
(1) One-sentence headline an exec can read in 5 seconds.
(2) What happened: a 4-bullet timeline. Facts only, no interpretation.
(3) Current state: what's happening right now, who is on it, ETA if known.
(4) Client impact: business consequence, not technical detail.
(5) The ask: what I need from leadership — approval, resources, executive sponsor outreach, or just visibility.

Tone: calm, factual, no hedging. Do not assign blame. Do not predict resolution time unless I gave you one.
```

SAMPLE OUTPUT

INDUSTRY: HR TECH · CLIENT: GLOBAL EMPLOYER, 14K EMPLOYEES

Headline. Payroll export to ADP failed for the 04/12 cycle at [Acme HR]; 4,200 EU employees affected; finance is escalating.

Timeline. 04/12 02:14 UTC — export job stalled. 04/12 06:30 — client noticed missing files. 04/12 07:15 — case opened, escalated to L2. 04/12 08:00 — engineering identified malformed locale field for 4,200 records.

Current state. Eng has a fix in staging, deploying to prod by 12:00 UTC. Backfill ETA: 14:00 UTC.

WHY THIS WORKS

Executives don't need the technical story. They need to know what happened, what's being done, and what they need to do. This prompt forces that hierarchy — and explicitly bans the two things that wreck escalation briefs: blame and speculation.

★ **Pro tip.** *After resolution, run the same prompt with the resolution data and ask for a "post-incident summary" version. You now have draft #1 of the recovery email to the client.*

PROMPT 04 · CLIENT EMAIL POLISHER

Send the email a VP would write.

Paste your draft client email and get an executive-ready version that is clear, professional, and action-oriented. Keeps your voice; removes the cruft.

★ WHEN TO USE · ANY CLIENT EMAIL THAT MATTERS

THE PROMPT

```
You are my client communication editor. I am about to send the email below to a client. Rewrite it to be sharper
without changing my voice or the substance.

Recipient role: [CLIENT TITLE — e.g., VP Operations]
Relationship tone: [WARM / NEUTRAL / COOL — pick what matches]
My draft: [PASTE EMAIL]

Rewrite with these rules:
(1) Lead with the ask or the answer in the first sentence. Not pleasantries.
(2) Cut filler words and hedging language ("just," "hopefully," "I think we might want to").
(3) Break long paragraphs into shorter ones a phone screen can handle.
(4) End with one clear next step — what happens next and who does it.
(5) Keep my tone. Do not make me sound like a marketing email.

Return the rewritten email plus a 2-line note on what changed and why.
```

SAMPLE OUTPUT

INDUSTRY: MARTECH SAAS · CLIENT: MARKETING OPS DIRECTOR

Rewritten email. Subject: Final approval needed by Thursday — campaign segmentation. Hi Sarah, the segmentation logic is built and tested. I need your sign-off on the three audience tiers so we can launch the 04/22 campaign on time. Tiers attached. Can you review and reply by EOD Thursday? If you'd rather walk through it live, I have 30 min open Wed at 2pm CT.

What changed. Pulled the ask into the first line. Removed three "just wanted to" hedges. Replaced "let me know your thoughts" with a dated next step.

WHY THIS WORKS

Most CSM emails bury the ask in paragraph three. This prompt forces it to the top — which is the single biggest readability lever in business writing. The "keep my voice" rule prevents the AI from over-correcting your style into corporate beige.

★ **Pro tip.** *Add the recipient's last reply to the prompt. The AI will match their phrasing and rhythm, which lifts response rate noticeably.*

PROMPT 05 · WEEKLY PRIORITIES ORGANIZER

Turn your to-do list into a battle plan.

Paste your week's to-dos and account notes. Get back a prioritized action plan sorted by urgency and client impact, with the things you should not do this week called out separately.

★ WHEN TO USE · EVERY MONDAY MORNING · 10 MINUTES

THE PROMPT

```
You are my weekly priorities organizer. It is Monday morning. I need you to take everything below and produce a
prioritized plan for my week.

My to-do list, open commitments, account notes, calendar context, and anything I jotted down: [PASTE EVERYTHING]

Produce a plan with three sections:
(1) Top 3 must-do this week — items that have hard deadlines or carry the biggest revenue or relationship risk if I
skip them. Tell me why each one made the top 3.
(2) Second tier — important but flexible. Sort by client impact.
(3) Defer or delete — tasks I should drop, batch, or push to next week. Be ruthless. Tell me why.

For each item in sections 1 and 2, give me one sentence on the next physical action — the smallest concrete thing I can
do to move it forward.
```

SAMPLE OUTPUT

INDUSTRY: RETAIL TECH · CLIENT PORTFOLIO: 6 ENTERPRISE ACCOUNTS

Top 3. (1) [BrightCart] renewal call Wednesday — contract expires May 1, no signed paper yet. Next action: send the redlined MSA to procurement this morning. (2) [LumenShop] escalation update — they asked for status by Tuesday EOD. Next action: pull the ticket timeline and draft the brief by 11am Tuesday. (3) QBR deck for [Northwind] — meeting Friday, deck not started. Next action: run the QBR Narrative Builder prompt today.

Defer. Internal training session prep. The session is in three weeks and the materials are 80% reused from last quarter — push to next Monday.

WHY THIS WORKS

The prompt forces a "must-do vs nice-to-do" split most CSMs never make explicitly — which is why everything feels urgent. The "defer or delete" section is the secret weapon: it gives you permission to drop things, with a justification you can repeat to your manager.

★ **Pro tip.** *Paste your last week's plan too. The AI will flag anything that rolled over and either escalate it (if it's still important) or kill it (if it never mattered).*

You've got the toolkit. Here's what comes next.

These five prompts are 5 of 35+ inside **Customer Success OS: The AI Playbook for Customer Success Managers** — a complete operating system for running a modern CSM book of business with AI as a teammate, not a gimmick.

The full playbook covers account intelligence, health scoring, QBR mastery, escalation management, stakeholder mapping, renewal and expansion, and how to govern AI safely in a regulated industry. Plus 6 ready-to-deploy AI agent blueprints.
